

Installation Instruction Sheet

Linear Fixtures

INSTALLATION INSTRUCTIONS FOR JOINING AND SUSPENDING FIXTURES

1. Suspend the pivot connector from ceiling using 3/32" aircraft cable and gripper with 1/4-20 x 1" stud.
2. Suspend one of the LNXX2.0 fixtures on either side of the pivot connector, attaching by 10-24 x 3.5" screw.
3. After leveling fixture to desired height, excess aircraft cable can be snipped off at pivot connector gripper's side exit.

NOTE: Segments of LNXX2.0 on either side of any pivot connectors, whether individual as shown or as thru-wired multiples in a row, require a power feed drop.

***DO NOT MAKE JOINT CONNECTIONS BEFORE HANGING, OR BUILD CONFIGURATIONS ON THE GROUND! EACH PIECE MUST BE HUNG INDIVIDUALLY!**
